Over the last 50 years, since its birth in 1964, Zanetti Arturo & C Srl has acquired increasingly deeper and qualified experience in every sector related to the collection and treatment of waste of whatever kind. Our company deals with the collection, transport, disposal and recovery of municipal and industrial waste, including urban, hazardous waste, liquid and solid, medical, inert and recyclable waste. To demonstrate our commitment and expertise, the Zanetti Group has obtained all of the main industry certifications, issued by qualified agencies in the field.

Over time, the company, which has its headquarters in Mapello (province of Bergamo), has become more and more specialized, gaining expertise that has allowed it to offer an ever-widening variety of environmental services of the highest quality and safety. The company philosophy is one that fosters a strategy in harmony with the ever-evolving needs of the market and of society. The Zanetti Group considers technological development and a policy of continual investment as the two main pillars of this philosophy.
ENVIRONMENTAL HYGIENE SERVICES

Integrated-system-quality-environment-safety CERTIFIED
In the third millennium the concept of sustainable development revolves around the ideas of energy recovery and waste recycling. Every year in Italy alone, 29 million tons of urban waste and 142 million tons of special waste (ISPRA Report – 2012) are produced. It is therefore necessary to harmonize our development model with the need for smart environmental resource and waste management, as stated in the European Union directives. This involves a reduction in the production of waste at the origin, energy recovery, and only then, the possible disposal of the residual waste that cannot be used.
Why choose Zanetti Arturo & C.?

It's the only company that over the last fifty years has been able to offer a wide variety of environmental hygiene services, while at the same time guaranteeing a high level of specialization and experience.

- The company holds the authorization for its own plant.
- The company is registered in the professional association of environmental management for transportation and brokerage.
- The entire responsibility of the operation therefore lies with Zanetti Arturo & C. S.r.l., guaranteeing the highest level of protection and safety to the final customer.

A facility like NO OTHER

Focusing from the beginning on concepts such as ecology, environmental protection, efficiency and customer satisfaction, Zanetti Arturo & C. S.r.l. continues to develop its facility by strengthening and expanding its internal resources. At our headquarters we have our own machinery and our staff is constantly kept up-to-date with specific training and educational refresher courses. Investments, in terms of economic, human and technological resources, today allow us to offer solutions that are able to meet the needs of a wide range of contexts and realities: public administration, industry, business, hospitals and healthcare facilities, agriculture and private citizens. Our facility functions on many different levels: analyzing particular problems and challenges, consulting, offering bureaucratic and administrative support, and of course, dealing with the practical aspects of waste collection, transport and disposal.
The Zanetti Arturo & C. company organization is structured in such a way so as to meet the needs of a wide range of contexts and realities, which are assured of the utmost efficiency that has been developed over the last fifty years at all stages of the process: planning, collection, transport and disposal. All this is done in a timely, punctual and effective manner. The high skill level of every employee is the best guarantee for our clients. Thanks to on-the-job training and refresher courses, the staff is constantly kept up-to-date with the continually evolving rules and regulations in this sector, as well as with the ever-changing market conditions.
Zanetti Arturo also collaborates with the main professional associations and is a trusted partner in dealing with all sorts of problems related to waste management:

- In the industry sector, for example, the company operates in accordance with ADR regulation for the management of special waste (both hazardous and non). This waste comes from various types of production, such as industrial, chemical, metal, electronic, textile, food, etc.

- In the craftsmanship and agriculture industries, the company offers micro-collection services (both hazardous and non-hazardous waste), which is also in accordance with ADR regulation.

- Additional services include: video inspection; cleaning of pipes, tubes and storm drains with gully suckers (all this is done with cutting edge technology); cleaning of iron and steel plants using high performance suction. All of this is carried out by specialized personnel equipped with all the tools required by specific regulations for work done in “confined spaces”.

ENVIRONMENTAL HYGIENE SERVICES
For more than fifty years Zanetti Arturo & C. has offered municipal solid waste collection services on behalf of city administrations in the province of Bergamo. With the passage of time and due to changing regulations related to public services and environmental protection, the company today offers a complete service to municipalities that includes billing and the collection of fees. This service is added to the door to door recycling service, as well as to other services such as street sweeping and the maintenance of public spaces, storm drains and manholes.

To complete its service, Zanetti Arturo & C., manages waste collection centers, transfer stations, ecological platforms, post-exhumation phases and cemetery waste disposal.

Beyond this, reclamation projects are carried out in polluted areas, as well as the management of purification plants.
The healthcare sector, which includes public and private hospitals, healthcare facilities and doctors’ offices, produces large quantities of special and mostly hazardous waste. Zanetti Arturo & C. became even further specialized in the sector by offering a complete service of collection and disposal of potentially infectious medical waste. This service includes the collection, transport and disposal in authorized plants for all kinds of waste. The company deals, in particular, with hazardous and potentially infectious medical waste, which is collected and transported to the disposal plants for sterilization and thermodestruction procedures, in accordance with ADR regulation.
Zanetti Service, a company of the Zanetti Group, has been in operation since 2010. It was created to complete the waste management service that until then had been offered by Zanetti Arturo & C.

Zanetti Service offers its clientel the possibility of having access to a group of professionals with a wide variety of interdisciplinary skills that complement each other. This ensures the achievement of excellent results for the various services offered and to provide adequate and punctual assistance with the following:

- Lab analysis aimed at categorizing different types of waste and waste water;
- Administrative and technical support for the issuing of new authorizations, registration in the professional association of environmental managers, and help with anything that may emerge as a result of new regulations (ex.: SISTRI);
- Planning of environmental hygiene services for public administration, healthcare facilities, industrial groups, etc.;
- Planning of reclamation and restoration projects;
- Newsletters aimed at spreading the word about new regulations in the environmental and work safety fields;
- Organization of training courses on environmental regulation and work safety;
- Planning and implementation of information campaigns about differentiated waste collection;
- Implementation of environmental education projects.
Zanetti Service has its own physical-chemical lab that is able to deal with the complex world of waste and waste water analysis. The high quality equipment ranges from pre-treatment systems to analyzers, which ensure that solutions to various problems and challenges are found, based on precise and reliable data.
